Is My Life Insurance Plan a Tax Shelter? (And if So ... So What?)

David Kakon, Math Honours B.Sc., July 2026 / David@ArmstrongLife.com

Immediate Financing Arrangements (IFAs) have been widely promoted to high-net-worth individuals as a strategy to fund permanent life insurance. The structure typically involves paying an annual premium, immediately borrowing the funds back to replenish capital (for legitimate income-generating purposes), and deducting the annual loan interest and a portion of the premium from income each year. The loan is designed to be carried indefinitely and repaid from the death benefit, leaving a net payout that is frequently pitched as “free insurance.”

*While much of the industry is focused on whether these arrangements violate the newly expanded General Anti-Avoidance Rule (GAAR), there is a more immediate, mechanical compliance risk. Based on a strict reading of the Income Tax Act's mathematical definitions, certain leveraged life insurance structures may qualify as **tax shelters**.*

The Math: How Could a Life Policy Become a Tax Shelter?

The CRA does not rely on subjective labels to define a tax shelter. Instead, under Subsection 237.1(1) of the Income Tax Act, they apply a strict mathematical test: if the “statements or representations” made to an investor (such as financial illustrations or marketing brochures) indicate that the expected tax deductions within the first four years will equal or exceed the investment’s “net cost,” the arrangement technically qualifies as a tax shelter.

Here is how that mathematical calculation applies to a typical IFA:

1. The Deductions: A plan cannot be a tax shelter unless formal representations regarding tax benefits are explicitly made. IFA illustrations effortlessly fulfill this statutory requirement by explicitly modelling the client’s ability to deduct the interest on the collateralized loan and the Net Cost of Pure Insurance (NCPI) portion of the premium.

2. The Net Cost & Limited-Recourse Debt: When calculating the ‘net cost’ of an arrangement, Section 237.1 of the *Income Tax Act* requires the investment to be mathematically reduced by any ‘prescribed benefits,’ which explicitly includes limited-recourse debt. For the loan in question to avoid being classified as a limited-recourse amount under Subsection 143.2(7), it must meet strict statutory criteria:

- **Requirement:** The rules require “... *bona fide arrangements in writing, at the time the indebtedness arose, for repayment of all principal and interest and the repayment will occur within a reasonable period **not exceeding 10 years.***” Furthermore, the CRA states that “... *the maximum 10-year time period for repayment cannot be avoided through a series of loans and repayments.*”
- **Commercial Reality:** Marketing materials and illustrations explicitly present these loans as lifelong facilities intended to be “*repaid out of the death benefit.*” The actual commercial execution perfectly matches this lifelong illustration, not a short-term repayment schedule.
- **The “Demand Loan” Defence:** Promoters would argue that because a bank issues a “demand loan” or a 1-year renewable facility, the debt is fully recourse. However, the CRA explicitly rejects this on two fronts. First, Subsection 143.2(12) legally treats a series of short-term renewable loans as one continuous loan. Second, if the *bona fide* intent—as documented by the promoter’s illustrations—is to carry that debt indefinitely until death, the CRA views the facility as a limited-recourse amount. This exact risk was acknowledged in a 2023 practice note by the Conference for Advanced Life Underwriting (CALU), warning its own advisors that “*The CRA has expressed the view that a demand loan is a limited recourse amount and therefore a prescribed benefit*” when the 10-year repayment timeline is absent (CRA 2010 Ruling 2009-0340381R3).

If the loan is deemed a limited-recourse amount, the resulting calculation is purely mathematical. Because, in most cases, the borrowed funds fully offset the premiums paid, the calculated “net cost” drops to **exactly \$0**. Illustrating even \$1 in tax deductions in any of the first four years against a \$0 net cost exposes the client to the technical legal risk that the plan is a tax shelter. If the CRA assesses the plan as a tax shelter and it is unregistered, the statutory consequences are immediate, retroactive and highly punitive—regardless of any legitimate business or investment use of the loan.

The Consequences of an Unregistered Tax Shelter

By law, a promoter must register a tax shelter with the CRA and obtain a Tax Shelter Identification Number before selling it. Based on the files we have reviewed to date, we have not seen these arrangements registered with a Tax Shelter Identification Number.

If a client's arrangement is assessed as an unregistered tax shelter, the potential CRA assessing positions are severe and would be applied retroactively:

Retroactive Denial of Deductions: Under Subsection 237.1(6), the CRA can automatically disallow all interest and NCPI deductions claimed under the arrangement, going back to the date the policy was purchased. The Income Tax Act explicitly states that without a valid Tax Shelter Number, no person may claim any deduction for any year.

Reduction of Cost Basis: Under Section 143.2, the CRA is legally empowered to erase the out-of-pocket investment for tax purposes. Because limited-recourse debt forces the recognized cost basis to \$0, this reduction could apply not only to the insurance policy itself but also, critically, to any assets or investments acquired with the borrowed funds.

Third-Party Penalties: Promoters and advisors who sell unregistered tax shelters can face a penalty equal to 25% of the total “consideration” received (which could encompass the total insurance premiums deposited by the subscriber).

What Can You Do?

If you suspect your life insurance arrangement may be an unregistered tax shelter, it is critical to act proactively before the CRA initiates an audit on your file.

- **Run the Math:** Work with an independent technical resource to calculate the “net cost” of your policy against the illustrated tax deductions in the first four years. If the deductions equal or exceed the net cost, the arrangement technically meets the tax shelter definition.
- **Ask for the TS Number:** Contact the promoter or broker who sold you the plan and request the Tax Shelter Identification Number. If they cannot provide one, your tax claims may be at risk of denial under the statute.

- **Seek Independent Tax Advice:** Do not rely solely on the promoter who sold you the plan to assess its compliance. Consult a qualified, reputable tax professional who has no financial connection to the policy or its outcome.

If statutory warnings and industry guidance are not enough, consider the CRA's explicit response to Question 1 at the 2026 CRA Roundtable (Reference: 2026-1089291C6) regarding their current audit activities:

We continue to seek out, audit and re-assess all arrangements which attempt to utilize insurance products or insurance-like products to gain a tax advantage not envisioned by tax policy and legislation.

Within CRA, the High Net Worth Compliance Directorate (HNWCD) develops, implements, and coordinates business intelligence and compliance initiatives to address non-compliance in the High Net Worth population through the Audit Program Division, which includes the Aggressive Tax Planning audit program (ATP), and the Tax Promoter and Advisor Compliance program (TPAC).

While the ATP Audit Program addresses aggressive tax planning by taxpayers who participated in such abusive insurance-related tax schemes, the TPAC program addresses non-compliance associated with promoters and advisors who promote or sell aggressive tax schemes. TPAC is accountable for identifying and combating aggressive tax schemes and holding promoters accountable through audit activities.

Navigating the landscape of leveraged life insurance products requires specialized technical expertise. Our firm has the modelling tools and experience to independently stress-test the mechanics of these complex arrangements. Because we do not sell or promote these strategies, we can offer an objective, conflict-free analysis. If you are a professional or advisor seeking a third-party review of an existing or proposed plan, feel free to reach out.

Appendix 1: Relevant Resources

Hexalog Ltée c. La Reine, 2005 TCC 67 Confirms that interconnected assets, loans, and fees marketed together form an "inseparable whole" for tax shelter testing. The courts rejected the attempt to separate the asset from the arrangement, applying penalties to the entire integrated package.

CRA TI 2006-0196251C6 - Abri fiscal & 2010 Ruling 2009-0340381R3 - Rente assurée

Explicit CRA rulings confirming that the CRA views "demand loans" and renewable facilities as limited-recourse amounts (prescribed benefits) if there is no bona fide written arrangement demonstrating the intent to fully repay the debt within 10 years.

Krumm v. The Queen (2020 TCC 7) Demonstrates that the tax shelter definition is purely mathematical and objective. It applies strictly based on the deductions represented against the net cost, regardless of the underlying asset class or its legitimate commercial use.

Canada v. Baxter, 2007 DTC 5199 & Jevremovic v. Canada, 2008 DTC 6263 Federal Court of Appeal decisions upholding the strict statutory consequences for unregistered tax shelters, validating the CRA's authority to retroactively deny all associated deductions.

Definitions for Tax shelters & Tax Shelter Reporting (CRA Circular) Official guidance detailing the mechanical application of the "Net Cost" formula, the treatment of limited-recourse debt, and mandatory registration requirements for promoters.

CRA Information Circular IC01-1R2: Third-Party Penalties (February 2026) Substantially updates the application of Section 163.2 third-party civil penalties, explicitly targeting advisors who promote aggressive tax structures through marketing or "thought leadership" to a broad audience, and removes the administrative limitation period for assessing penalties.

Appendix 2: The Statutory Chain

For professionals reviewing the structural integrity of these arrangements, the mathematical transition to a tax shelter could be triggered by the following legal chain:

- **ITA Section 143.2(7):** Classifies the financing as a "limited-recourse amount" if the arrangement lacks a bona fide written agreement requiring the principal to be fully repaid within 10 years. Additionally, 143.2(12) was added to stop promoters from using short-term renewable loans to bypass the 10-year repayment requirement (Sherman).
- **ITR Regulation 3100(3):** Specifically classifies any limited-recourse amount under Section 143.2 as a "prescribed benefit." Critically, this includes debt relating to "the arrangement under which the property is acquired," thereby integrating all parts of the plan as presented.
- **ITA Section 237.1(1):** Mandates that the legally recognized "net cost" of the investment must be reduced by all "prescribed benefits." Under this subsection, an arrangement meets the statutory definition of a tax shelter if the expected deductions in any of the first four years equal or exceed this adjusted net cost.

- **ITA Section 237.1(6):** Explicitly states that without a mandatory Tax Shelter Identification Number, no person may claim any deduction related to the arrangement. This statutory mechanism allows the CRA to automatically disallow all interest or Net Cost of Pure Insurance (NCPI) deductions claimed through the structure.
- **ITA Section 143.2(6):** Mandates that the recognized expenditure (the cost basis) must be proportionally reduced by the limited-recourse amount. This reduces the taxpayer's out-of-pocket investment for tax purposes, thereby exposing future policy distributions or the sale of assets acquired with the borrowed funds to increased or full taxation.
- **ITA Section 163.2:** Outlines substantial third-party civil penalties for promoters and advisors who facilitate or sign off on non-compliant arrangements. Professionals can face a gross negligence penalty equal to 25% of the total "consideration" received for the arrangement (which, in an IFA, the CRA may interpret to include the total insurance premiums deposited and commissions paid), creating severe personal liabilities.
