Is My Life Insurance Plan a Tax Shelter? (And if So ... So What?)

David Kakon, Math Honours B.Sc., July 2026 / David@ArmstrongLife.com

The Canada Revenue Agency (CRA) is actively auditing corporate life insurance strategies to identify critical tax shelter risks in traditional Immediate Financing Arrangements. Immediate Financing Arrangements (IFAs) have been widely promoted to high-net-worth individuals as a strategy to fund permanent life insurance.

The structure typically involves paying an annual premium, immediately borrowing the funds back to replenish capital (for legitimate income-generating purposes), and deducting the annual loan interest and a portion of the premium from income each year. The loan is designed to be carried indefinitely and repaid from the death benefit, leaving a net payout that is often pitched as “free insurance.”

While much of the industry is focused on whether these arrangements violate the newly expanded General Anti-Avoidance Rule (GAAR), there is a much more immediate, mechanical compliance risk. Based on a strict reading of the mathematical definitions in the Income Tax Act (ITA), it appears that certain leveraged life insurance structures may technically qualify as tax shelters. Advisors and corporate policyholders must carefully evaluate this risk.

The Math: How Could a Life Policy Become a Tax Shelter?

The CRA does not rely on subjective labels to define a tax shelter. Under Subsection 237.1(1) of the Income Tax Act, a strict mathematical test applies: if the representations made to a client (such as financial illustrations) indicate that the expected tax deductions in the first four years will equal or exceed the investment's "net cost," the arrangement is technically a tax shelter.

By law, any arrangement meeting this formula must be registered and receive a Tax Shelter Identification Number. If a plan qualifies as a tax shelter but operates without registration, the statutory consequences are absolute: the CRA will retroactively deny all associated tax deductions indefinitely, without being restricted by the normal statute of limitations.

In a typical IFA, a loan is used to immediately replenish the capital outlay of the insurance premium (even if for legitimate business purposes). The critical issue is how the CRA legally categorizes that debt.

Consequently, if the net cost is mathematically \$0, illustrating even \$1 in tax deductions for loan interest under **paragraph 20(1)(c)** or Net Cost of Pure Insurance (NCPI) under **paragraph 20(1)(e.2)** automatically triggers the tax shelter formula. This remains true even if the annual interest is paid out of pocket, net of tax credits.

Therefore, when the loans equal the premium amounts, the entire tax-shelter risk reduces to a single question: **Is the debt legally considered a "limited-recourse amount"?** If it is limited-recourse, it is a prescribed benefit. If it is a prescribed benefit, the cost base is \$0, and the plan is a tax shelter, registration is required.

The Statutory Trap: Limited-Recourse Debt & The Deeming Provision

When evaluating whether an IFA loan is a "limited-recourse amount," industry practitioners often point to outside collateral, personal guarantees, and the lender's ability to call the loan on demand as proof that the debt is "fully recourse." While these features satisfy a bank's commercial risk requirements, they do not satisfy the CRA.

Subsection 143.2(7) is a strict statutory deeming provision. The law explicitly commands that the loan is legally *deemed* to be a limited-recourse amount *unless* a specific timing condition is met at inception: there must be a bona fide written arrangement to repay the principal within a reasonable period not exceeding 10 years.

"...the unpaid principal amount of the indebtedness shall be deemed to be a limited-recourse amount... unless bona fide arrangements were made in writing, at the time the indebtedness arose, for repayment of all principal and interest... within a reasonable period not exceeding 10 years."

A deeming provision creates a legal fiction that overrides commercial facts. If a written 10-year repayment schedule does not exist at inception, the statute covers its ears, ignores the outside collateral, and legally deems the debt to be limited-recourse. *See a more detailed analysis [here](#).*

The “Demand Loan” Loophole is Closed

To circumvent the 10-year rule, promoters often structure IFA financing as 1-year renewable demand loans, arguing they are fully recourse. The ITA closes this loophole on two fronts:

1. Under Subsection 143.2(12), if a repayment can reasonably be considered part of a series of rolling loans, the CRA treats the series as one continuous loan.
2. Because marketing materials and illustrations explicitly present these facilities as lifelong loans intended to be “repaid out of the death benefit,” they legally constitute a series of loans lacking a 10-year repayment intent.

Consequently, the demand loan defaults to a limited-recourse amount. This exact risk was acknowledged in a 2023 practice note by the Conference for Advanced Life Underwriting (CALU), warning its own advisors that the CRA views a demand loan as a limited recourse amount when the 10-year repayment timeline is absent, referencing 2010 Ruling 2009-0340381R3 F.

The Consequences of an Unregistered Tax Shelter

By law, a promoter must register a tax shelter with the CRA and obtain a Tax Shelter Identification Number before selling it. Based on the files we have reviewed to date, we have not seen these arrangements registered with a Tax Shelter Identification Number.

If a client’s arrangement is assessed as an unregistered tax shelter, the potential CRA assessing positions are severe. Based on active CRA field audits, these reassessments are being applied retroactively to the date of the policy’s purchase:

1. **Retroactive Denial of Deductions:** Under Subsection 237.1(6), the CRA can automatically disallow all paragraph 20(1)(c) interest and paragraph 20(1)(e.2) NCPI deductions claimed under the arrangement, going back to the date the policy was purchased. The *Income Tax Act* explicitly states that without a valid Tax Shelter Number, no person may claim any deduction for any year.
2. **Reduction of Cost Basis:** Under **Subsection 143.2(6)**, the CRA is legally empowered to erase the out-of-pocket investment for tax purposes. Because limited-recourse debt forces the recognized cost basis to \$0, this reduction applies not only to the insurance policy itself, but forces the Adjusted Cost Base (ACB) of any income-producing assets acquired with the borrowed funds to nil—creating massive, immediate capital gains exposure on historical asset sales.

3. **Third-Party Penalties:** Promoters and advisors who sell unregistered tax shelters can face severe civil penalties under Section 163.2. These gross negligence penalties equal 25% of the total "consideration" received (which the CRA may interpret to encompass the total insurance premiums deposited by the subscriber), creating massive personal liability for the professionals who recommended the structure.

What Can You Do?

If you suspect your life insurance arrangement may be an unregistered tax shelter, it is critical to act proactively before the CRA initiates an audit on your file.

- **Run the Math:** Work with an independent technical resource to calculate the "net cost" of your policy against the illustrated tax deductions in the first four years. If the deductions equal or exceed the net cost, the arrangement technically meets the tax-shelter definition.
- **Ask for the TS Number:** Contact the promoter or broker who sold you the plan and request the Tax Shelter Identification Number. If they cannot provide one, your tax claims may be at risk of denial under the statute.
- **Seek Independent Tax Advice:** Do not rely solely on the promoter who sold you the plan to assess its compliance. Consult a qualified, reputable tax professional who has no financial connection to the policy or its outcome.

CRA Activity

If statutory warnings and industry guidance are not enough, consider the CRA's explicit response to Question 1 at the 2026 CRA Roundtable (Reference: 2026-1089291C6) regarding their current audit activities:

We continue to seek out, audit and re-assess all arrangements which attempt to utilize insurance products or insurance-like products to gain a tax advantage not envisioned by tax policy and legislation.

Within CRA, the High Net Worth Compliance Directorate (HNWCD) develops, implements, and coordinates business intelligence and compliance initiatives to address non-compliance in the High Net Worth population through the Audit Program Division, which includes the Aggressive Tax Planning audit program (ATP), and the Tax Promoter and Advisor Compliance program (TPAC).

While the ATP Audit Program addresses aggressive tax planning by taxpayers who participated in such abusive insurance-related tax schemes, the TPAC program addresses non-compliance associated with promoters and advisors who promote or sell aggressive tax schemes. TPAC is accountable for identifying and combating aggressive tax schemes and holding promoters accountable through audit activities.

Navigating the landscape of leveraged life insurance products requires specialized technical expertise. Our firm has the modelling tools and experience to independently stress-test the mechanics of these complex arrangements. Because we do not sell or promote these strategies, we can offer an objective, conflict-free analysis. If you are a professional or advisor seeking a third-party review of an existing or proposed plan, feel free to reach out.

Appendix 1: Relevant Resources

- *Hexalog Ltée c. La Reine, 2005 TCC 67* Confirms that interconnected assets, loans, and fees marketed together form an "inseparable whole" for tax shelter testing. The courts rejected the attempt to separate the asset from the arrangement, applying penalties to the entire integrated package.
- *CRA TI 2006-0196251C6 - Abri fiscal & 2010 Ruling 2009-0340381R3 - Rente assurée* Explicit CRA rulings confirming that the CRA views "demand loans" and renewable facilities as limited-recourse amounts (prescribed benefits) if there is no bona fide written arrangement demonstrating the intent to fully repay the debt within 10 years.
- *Krumm v. The Queen (2020 TCC 7)* Demonstrates that the tax shelter definition is purely mathematical and objective. It applies strictly based on the deductions represented against the net cost, regardless of the underlying asset class or its legitimate commercial use.
- *Canada v. Baxter, 2007 DTC 5199 & Jevremovic v. Canada, 2008 DTC 6263* Federal Court of Appeal decisions upholding the strict statutory consequences for unregistered tax shelters, validating the CRA's authority to retroactively deny all associated deductions.
- *Definitions for Tax shelters & Tax Shelter Reporting (CRA Circular)* Official guidance detailing the mechanical application of the "Net Cost" formula, the treatment of limited-recourse debt, and mandatory registration requirements for promoters.
- *CRA Information Circular IC01-1R2: Third-Party Penalties (February 2026)* Substantially updates the application of Section 163.2 third-party civil penalties, explicitly targeting advisors who promote aggressive tax structures through marketing or "thought leadership" to a broad audience, and removes the administrative limitation period for assessing penalties.

Appendix 2: The Statutory Chain

For professionals reviewing the structural integrity of these arrangements, the mathematical transition to a tax shelter could be triggered by the following legal chain:

- *ITA Section 143.2(7): Classifies the financing as a "limited-recourse amount" if the arrangement lacks a bona fide written agreement requiring the principal to be fully repaid within 10 years. Additionally, 143.2(12) was added to stop promoters from using short-term renewable loans to bypass the 10-year repayment requirement (Sherman).*
- *ITR Regulation 3100(3): Specifically classifies any limited-recourse amount under Section 143.2 as a "prescribed benefit." Critically, this includes debt relating to "the arrangement under which the property is acquired," thereby integrating all parts of the plan as presented.*
- *ITA Section 237.1(1): Mandates that the legally recognized "net cost" of the investment must be reduced by all "prescribed benefits." Under this subsection, an arrangement meets the statutory definition of a tax shelter if the expected deductions in any of the first four years equal or exceed this adjusted net cost.*
- *ITA Section 237.1(6): Explicitly states that without a mandatory Tax Shelter Identification Number, no person may claim any deduction related to the arrangement. This statutory mechanism allows the CRA to automatically disallow all interest or Net Cost of Pure Insurance (NCPI) deductions claimed through the structure.*
- *ITA Section 143.2(6): Mandates that the recognized expenditure (the cost basis) must be proportionally reduced by the limited-recourse amount. This reduces the taxpayer's out-of-pocket investment for tax purposes, thereby exposing future policy distributions or the sale of assets acquired with the borrowed funds to increased or full taxation.*
- *ITA Section 163.2: Outlines substantial third-party civil penalties for promoters and advisors who facilitate or sign off on non-compliant arrangements. Professionals can face a gross negligence penalty equal to 25% of the total "consideration" received for the arrangement (which, in an IFA, the CRA may interpret to include the total insurance premiums deposited and commissions paid), creating severe personal liabilities.*
